

MS Project

PROCORE™

Keep Project Schedules Up-to-Date, Easily

A project schedule is only useful if it's accurate. Procore makes it easy to keep your schedule up-to-date. Using Procore for scheduling means that changes are logged and shown to all your project team members, immediately. No more outdated schedules. Procore works with most scheduling tools, including MS Project and Primavera's products. Your team can use the scheduling tools they already know to create and edit project schedules. Procore puts project schedules on the web, where team members can instantly see the latest changes.

Access Sage Timberline Office Job Cost Data From The Web

Procore lets authorized STO users view job cost summary data, project committed costs, and vendor invoices right on the web. Information is kept up-to-date automatically, so that project team members in the field always have access to the latest status of job cost items. Procore can be used from within the STO Desktop, making it easy for Sage Timberline Office users to get up and running. Procore keeps team members on the same page, with all the latest job cost information.
