

Mobile Inventory

An integrated application designed for Palm OS handheld devices, Mobile Inventory speeds the counting and distribution of inventory, improves tracking accuracy, and tightens control of your inventory management and issuing processes.

The software provides the dual functionality of inputting new stock counts and performing physical inventory counts without a direct connection to a networked PC. Remote warehouse personnel can perform these tasks and upload the data into your system when it is convenient. By avoiding paper documentation and eliminating any re-keying of inventory items, on-the-spot control is achieved, assuring both accuracy and ready access to the status of inventory.

Features and efficiencies

- Issue requisitioned stock items to jobsites with minimal delay.
- Count inventory accurately and quickly using barcode technology to identify items and eliminate keying in item numbers.
- Easily synchronize data in handheld devices when updating data in your Inventory system.
- Automatically compare to your inventory master file to validate counts and locations of stock.
- Reduce stock shrinkage through tighter inventory control.

Mobile Inventory is a part of Sage Timberline Office, fully integrated software created to streamline work and connect the people you depend on to build your business.

Accurately issue items to designated jobs. Save time, reduce the potential for error, and have job cost information at the ready.
