

Mobile Purchasing

An integrated application designed for Palm OS handheld devices, Mobile Purchasing allows you to start the purchasing process as soon as you recognize the need.

The software provides a simple and accurate way for field personnel to enter a purchase order, a blanket order, or subcontract order directly from a remote location.

Mobile Purchasing eliminates relaying a purchase order by phone and the possibility of mis-entering order information into your system. Project managers and superintendents save time by entering orders on the spot and submitting them without delay to your purchase order system.

Features and efficiencies

- Maintain accuracy and control through single-point entry of order information.
- Begin the order process immediately upon determining the need and reduce potential job delays.
- Set security by individual user, limiting maximum purchase amount, fixing the range of allowable PO numbers, and restricting blanket or subcontractor orders.
- Synchronize with Inventory to validate item numbers, job number, extras, cost codes, cost categories, equipment, and equipment cost codes.

Mobile Purchasing is a part of Sage Timberline Office, fully integrated software created to streamline work and connect the people you depend on to build your business.

Enter purchase order item detail in one convenient screen. Reduce the potential for error and save time entering or calling in purchase orders.
